Nonlinear Estimation and Classification - David D. Denison 2013-11-11

Researchers in many disciplines face the formidable task of analyzing massive amounts of high-dimensional and highly-structured data. This is due in part to recent advances in data collection and computing technologies. As a result, fundamental statistical research is being undertaken in a variety of different fields. Driven by the complexity of these new problems, and fueled by the explosion of available computer power, highly adaptive, non-linear procedures are now essential components of modern "data analysis," a term that we liberally interpret to include speech and pattern recognition, classification, data compression and signal processing. The development of new, flexible methods combines advances from many sources, including approximation theory, numerical analysis, machine learning, signal processing and statistics. The proposed workshop intends to bring together eminent experts from these fields in order to exchange ideas and forge directions for the future.

Nutrient Requirements of Dairy Cattle - National Academies of Sciences Engineering and Medicine 2021-08-30

Since 1944, the National Research Council (NRC) has published seven editions of the Nutrient Requirements of Dairy Cattle. This reference has guided nutritionists and other professionals in academia and the dairy and feed industries in developing and implementing nutritional and feeding programs for dairy cattle. The eighth revised edition of the Nutrient Requirements of Dairy Cattle builds on the previous editions. A great deal of new research has been published and there is a large amount of new information for many nutrients. This book represents a comprehensive review of the most recent information available on efficient, profitable, and environmentally conscious dairy cattle nutrition and ingredient composition.

Cissp Exam Cram, 2/E (With Cd) - Gregg Michael 2009-09

Heritage and Community Engagement - Emma Waterton 2013-09-13

This book is about the way that professionals in archaeology and in other sectors of heritage interact with a range of stakeholder groups, communities and the wider public. Whilst these issues have been researched and discussed over many years and in many geographical contexts, the debate seems to have settled into a comfortable stasis wherein it is assumed that all that can be done by way of engagement has been done and there is little left to achieve. In some cases, such engagement is built on legislation or codes of ethics and there can be little doubt that it is an important and significant aspect of heritage policy. This book is different, however, because it questions not so much the motivations of heritage professionals but the nature of the engagement itself, the extent to which this is collaborative or contested and the implications this has for the communities concerned. Furthermore, in exploring these issues in a variety of contexts around the world, it recognises that heritage provides a source of engagement within communities that is separate from professional discourse and can thus enable them to find voices of their own in the political processes that concern them and affect their development, identity and well-being. This book was published as a special issue of the International Journal of Heritage Studies.

Freud on the Psychology of Ordinary Mental Life - Susan Sugarman 2010-06-16

Freud, although best known for his elucidation of the unusual in human mental life, also attempted to

illuminate ordinary human experience, such as people's appreciation of humor, their capacity to become engrossed in fiction, and their disposition to a variety of emotional experiences, including the uncanny, the stirrings prompted by beauty, and their disposition to mourn. His insights into the everyday and his sense of where within it the productive questions lie reveal an incisiveness that defies both earlier and subsequent thought on his topics. This book works to expose that vision and to demonstrate its fertility for further inquiry. It reconstructs several of Freud's works on ordinary mental life, tracking his method of inquiry, in particular his search for the child within the adult, and culminating in a deployment of his tools independently of his analyses. It shows how to read Freud for his insight and generativity and how to push beyond the confines of his analyses in pursuit of new lines of exploration.

Functional Analysis in Asymmetric Normed Spaces - Stefan Cobzas 2012-10-30

An asymmetric norm is a positive definite sublinear functional p on a real vector space X . The topology generated by the asymmetric norm p is translation invariant so that the addition is continuous, but the asymmetry of the norm implies that the multiplication by scalars is continuous only when restricted to non-negative entries in the first argument. The asymmetric dual of X , meaning the set of all real-valued upper semi-continuous linear functionals on X , is merely a convex cone in the vector space of all linear functionals on X . In spite of these differences, many results from classical functional analysis have their counterparts in the asymmetric case, by taking care of the interplay between the asymmetric norm p and its conjugate. Among the positive results one can mention: Hahn-Banach type theorems and separation results for convex sets, Krein-Milman type theorems, analogs of the fundamental principles - open mapping, closed graph and uniform boundedness theorems - an analog of the Schauder's theorem on the compactness of the conjugate mapping. Applications are given to best approximation problems and, as relevant examples, one considers normed lattices equipped with asymmetric norms and spaces of semi-Lipschitz functions on quasi-metric spaces. Since the basic topological tools come from quasi-metric spaces and quasi-uniform spaces, the first chapter of the book contains a detailed presentation of some basic results from the theory of these spaces. The focus is on results which are most used in functional analysis - completeness, compactness and Baire category - which drastically differ from those in metric or uniform spaces. The book is fairly self-contained, the prerequisites being the acquaintance with the basic results in topology and functional analysis, so it may be used for an introduction to the subject. Since new results, in the focus of current research, are also included, researchers in the area can use it as a reference text.

The Complete Aubrey/Maturin Novels - Patrick O'Brian 2004

The Location of Foreign Direct Investment - Milford B. Green 1995

Giving Places Meaning - Linda Groat 1995-01-01

Since its inception, the Journal of Environmental Psychology has demonstrated its pre-eminence through publishing original, innovative papers. By bringing them together in one volume, ready access has been provided to the first-hand accounts of a range of explorations that are central to the growth and development of environmental psychology itself. There is now an agreement amongst most environmental

psychology researchers that particular locations within the environment do harbour rich significance for individuals and groups. There is a great deal of productive debate about the cognitive and affective processes that give rise to this significance, but it is clear that the significance of places can include both deep emotional attachment and more abstract aesthetic enjoyment. Psychologists have been rather reluctant to examine the content of personal meanings, except in the intensity of the therapeutic interview, leaving such explorations to literary critics. The present volume goes some way to redress that balance and show the value of tackling meaning head on, rather than through the lens of structure and form. This volume will therefore be of value beyond environmental psychology in showing the value of studying meanings in context and the ways in which they give our world significance.

Multinational Firms in the World Economy - Giorgio Barba Navaretti 2020-06-16

Depending on one's point of view, multinational enterprises are either the heroes or the villains of the globalized economy. Governments compete fiercely for foreign direct investment by such companies, but complain when firms go global and move their activities elsewhere. Multinationals are seen by some as threats to national identities and wealth and are accused of riding roughshod over national laws and of exploiting cheap labor. However, the debate on these companies and foreign direct investment is rarely grounded on sound economic arguments. This book brings clarity to the debate. With the contribution of other leading experts, Giorgio Barba Navaretti and Anthony Venables assess the determinants of multinationals' actions, investigating why their activity has expanded so rapidly, and why some countries have seen more such activity than others. They analyze their effects on countries that are recipients of inward investments, and on those countries that see multinational firms moving jobs abroad. The arguments are made using modern advances in economic analysis, a case study, and by drawing on the extensive empirical literature that assesses the determinants and consequences of activity by multinationals. The treatment is rigorous, yet accessible to all readers with a background in economics, whether students or professionals. Drawing out policy implications, the authors conclude that multinational enterprises are generally a force for the promotion of prosperity in the world economy.

Fuzzy Logic in Geology - Robert V. Demicco 2003-10-20

What is fuzzy logic?--a system of concepts and methods for exploring modes of reasoning that are approximate rather than exact. While the engineering community has appreciated the advances in understanding using fuzzy logic for quite some time, fuzzy logic's impact in non-engineering disciplines is only now being recognized. The authors of Fuzzy Logic in Geology attend to this growing interest in the subject and introduce the use of fuzzy set theory in a style geoscientists can understand. This is followed by individual chapters on topics relevant to earth scientists: sediment modeling, fracture detection, reservoir characterization, clustering in geophysical data analysis, ground water movement, and time series analysis. George Klir is the Distinguished Professor of Systems Science and Director of the Center for Intelligent Systems, Fellow of the IEEE and IFSA, editor of nine volumes, editorial board member of 18 journals, and author or co-author of 16 books Foreword by the inventor of fuzzy logic-- Professor Lotfi Zadeh

Earthquakes in the Mediterranean and Middle East - Nicholas Ambraseys 2009-10-22

This book examines historical evidence from the last 2000 years to analyse earthquakes in the eastern Mediterranean and Middle East. Early chapters review techniques of historical seismology, while the main body of the book comprises a catalogue of more than 4000 earthquakes identified from historical sources. Each event is supported by textual evidence extracted from primary sources and translated into English. Covering southern Rumania, Greece, Turkey, Lebanon, Israel, Egypt, Jordan, Syria, and Iraq, the book documents past seismic events, places them in a broad tectonic framework, and provides essential information for those attempting to prepare for, and mitigate the effects of, future earthquakes and tsunamis in these countries. This volume is an indispensable reference for researchers studying the seismic history of the eastern Mediterranean and Middle East, including archaeologists, historians, earth scientists, engineers and earthquake hazard analysts. A parametric catalogue of these seismic events can be downloaded from www.cambridge.org/9780521872928.

Petrogenesis and Exploration of the Earth's Interior - Domenico M. Doronzo 2019-04-06

This edited volume is based on the best papers accepted for presentation during the 1st Springer Conference of the Arabian Journal of Geosciences (CAJG-1), Tunisia 2018. The book is of interest to all

researchers in the fields of Mineralogy, Geochemistry, Petrology and Volcanology. The Earth's interior is a source of heat, which makes our planet unique. This source regulates the formation and evolution of rocks at larger scales, and of minerals and sediments toward smaller scales. In such context, the exploration of georesources (products) has to be related to petrogenesis (processes). This volume offers an overview of the state-of-the-art petrogenesis and exploration in, but not limited to, the Middle East and Mediterranean regions. It gives new insights into processes and products related to the Earth's interior, and associated georesources by international researchers. Main topics include: 1. Petrogenetic processes: geochemistry, geochronology and geophysical approaches 2. Surficial processes: sedimentation and facies analysis 3. Applied mineralogy and tectonics 4. Geological research applied to mineral deposits

Continental Evolution: The Geology of Morocco - André Michard 2008-09-26

Morocco is one of the most fascinating lands in the world from the point of view of its geological structure and evolution. Our knowledge on the geology of the country has been greatly improved during the last decades, based on numerous seismic profiles and boreholes, seismological analysis of focal mechanisms, seismic tomography, gravimetric/geodetic modelling and, on the other hand, based on a big National Program of Geological Mapping including modern geochemical analyses (trace elements) and reliable isotopic datings (39Ar-40Ar, U-Pb zircon, Sm-Nd, etc). Moreover, a number of academic studies have been performed in relation with the increasing number of Moroccan universities. Accordingly, there was an utmost urgency to undertake a new treatise of Moroccan geology which could substitute for the classical *Éléments de géologie marocaine*, published in 1976 by A. Michard in the *Notes et Mémoires du Service géologique du Maroc* (re-edited twice since 1976, with more than 6000 copies sold, and... translated in Japanese for engineers!). A new treatise has been prepared between April 2006 and July 2007 under the coordination of A. Michard, assisted by O. Saddiqi, and A. Chalouan, by a wide panel of authors from Morocco, France or Belgium among the best connoisseurs of the country. In order to emphasize the general interest of the book, we finally retain the following title: *Continental Evolution: The Geology of Morocco. Structure, Stratigraphy, and Tectonics of the Africa-Atlantic-Mediterranean Triple junction*. The editing and production of this book was supported by the following organisations: The Geological Society of France (SGF) The National Office of Hydrocarbons and Mines of Morocco (ONHYM) The International Lithosphere Program (ILP)

Animal Genomics - Bhanu P. Chowdhary 2003

This publication provides an update on the current status of gene maps in different livestock and pet/companion animal species. The findings summarized in species specific commentaries and original articles testify the rapid advances made in the field of animal genomics. Of significant interest is the fact that current investigations are providing headways for two important and exciting research fronts: targeted high-resolution mapping leading to the application of genomic information in addressing questions of economic and biological significance in animals, and the initiation of whole genome sequencing projects for some of the animal species. Like in humans and mice, this will set the stage for a new level of research and real time complex analysis of the genomes of these species. Animal Genomics signifies the beginning of a new era in this field and celebrates the achievements of the past 20 years of genomics research. It will be of special interest to researchers involved in genome analysis - both gross chromosomal as well as molecular - in various animal species, and to comparative and evolutionary geneticists.

World Agricultural Supply and Demand Estimates - 2007

Explaining International Production (Routledge Reviews) - John H. Dunning 2014-11-13

John Dunning's general theory of international production, first propounded in the late 1970's, has generated considerable debate. This work thoughtfully reassesses the paradigm, and extends the analysis to embrace issues of theoretical and empirical importance. In a collection of essays, the changing characteristics of international production are examined, and an interdisciplinary approach suggested for understanding the multinational enterprise in the world economy. This book, first published in 1988, will be of value not only to economists and international business analysts, but to scholars in other fields, notably organizational, marketing and management specialists.

Landscapes and Landforms of Turkey - Catherine Kuzucuoğlu 2019-01-08

This book on Turkish geomorphology offers location descriptions, based on their dynamics and evolution processes, including hydrology, tectonics, volcanism, slopes, coasts, ice/snow, and wind. It presents landforms as a result of evolution (Quaternary, Holocene, historic) and in relation to the elements determining and/or impacting this evolution (vegetation, soil, hydrology, geology, climate, sea level and human action) as well as the resulting landscapes. Richly illustrated with pictures from each site, including geomorphological maps and sections, it explains the risks associated with the geomorphological dynamics (on local and global scales), natural and/or cultural heritage (archaeology, prehistory, history, architectural specifications adapted to the landscape), as well as challenges for human society (endangered landscape, protection/conservation rules/statutes, posters/paintings.).

Fiscal Space for Health in Uganda Peter Okwero 2010-04-05

This paper reviews the performance of the health sector in Uganda. It addresses concerns in the Ugandan health community that health financing must be increased to improve health, nutrition, and population outcomes, especially given the rapid increase in the country's population. Although international development aid targeted to health has increased dramatically, Uganda's first priority is actions to reduce waste and inefficiency in existing health expenditures. Such actions could include improved management of human resources in the health sector, strengthened procurement and logistics management for medicines and medical supplies, and better programming of development assistance of health. This paper is targeted to health policy makers and those involved in health services financing, both in the government and in donor agencies. This working paper was produced as part of the World Bank's Africa Region Health Systems for Outcomes (HSO) Program. The Program, funded by the World Bank, the Government of Norway, the Government of the United Kingdom, and the Global Alliance for Vaccines and Immunization (GAVI), focuses on strengthening health systems in Africa to reach the poor and achieve tangible results related to Health, Nutrition, and Population. The main pillars and focus of the program center on knowledge and capacity building related to Human Resources for Health, Health Financing, Pharmaceuticals, Governance and Service Delivery, and Infrastructure and ICT.

Labour Mobility in the EU Kristina Toplak 2018-09-01

V šestih prispevkih monografije so analizirani obstoječi in porajajoči se izzivi na področju delovne mobilnosti v Evropski uniji, pri čemer jih avtorji obravnavajo skozi prizmo mobilnih delavcev v različnih poklicih. Z večdisciplinarnim pristopom in uporabo različnih metodoloških prijemov so avtorji ustvarili ogrodje za analitične diskusije o učinkih mobilnosti v EU, učinkovitosti in pravičnosti prostega pretoka oseb znotraj EU ter večplastnosti posledic za posameznike, države članice in nacionalne politike. Prvi prispevek je teoretski uvod v tematiko, ki mobilnost izčrpno predstavi kot teoretski koncept, politično agendo in temeljno evropsko vrednoto. Kompleksni preplet mnogoterih učinkov delovne mobilnosti, ki se pojavljajo na več ravneh, je v nadaljevanju obravnavan v petih študijah primera. Le-te osvetljujejo dileme, paradokse, učinke in posledice notranje mobilnosti v EU na primerih mobilnih zdravstvenih delavcev, umetnikov in kulturnih delavcev, napotnih delavcev, skrbstvenih delavk in visoko izobraženih delavcev. Vsi predstavljeni primeri so rezultat večletnih znanstvenoraziskovalnih prizadevanj in aktivnega delovanja avtorjev v različnih projektih s področja mobilnosti.

Fundamentals of Neurophysiology - R.F. Schmidt 2012-12-06

The English edition of this book has been prepared from the third German edition published in December 1974. The first two German editions, published in 1971 and 1972, respectively, were very well received in Germany. We hope that this English version will enjoy a similar popularity by students wishing to understand the essential concepts relevant to the fascinating field of neurophysiology. The evolution of this book has been unique. The first edition was based on a series of lectures presented for many years to first-

year physiology students at the Universities of Heidelberg and Mannheim. These lectures were converted into a series of 38 programmed texts, and after extensive testing, published as a programmed textbook of neurophysiology (Neurophysiologie programmiert, Springer-Verlag Heidelberg, 1971). Thereafter the present text was written and thoroughly brought up to date. Throughout this period all of the authors were members of the Department of Physiology in Heidelberg allowing for maximum cooperation at all stages of this endeavor. With regard to the English edition, I wish to express my appreciation to Mr. Derek Jordan and Mrs. Inge Jordan for translating this book, and to my colleagues Dr. Mark Rowe and Dr. Dean O. Smith for their valuable comments and suggestions on the English manuscript. I express my grateful thanks to the publishers, both in Heidelberg and New York, for their unfailing courtesy and for their extraordinary efficiency.

Functional Morphology and Diversity - Les Watling 2012-12-14

Crustaceans are increasingly used as model organisms in all fields of biology, including neurobiology, developmental biology, animal physiology, evolutionary ecology, biogeography, and resource management. One reason for the increasing use of crustacean examples is the wide range of phenotypes found in this group and the diversity of environments they inhabit; few other taxa exhibit such a variety of body shapes and adaptations to particular habitats and environmental conditions. A good overview of their functional morphology is essential to understanding many aspects of their biology. This volume is the first in The Natural History of Crustacea series, a ten-volume series that will treat all aspects of crustacean biology, physiology, behavior, and evolution. The series updates and synthesizes a growing wealth of information on the natural history of this remarkable group. Functional Morphology and Diversity explores the functional morphology of crustaceans, which cover the main body parts and systems. The book brings together a group of internationally recognized and up-and-coming experts in fields related to systematics and morphology. Contributing authors study a range of crustacean taxa and topics, and thus the volume provides a compact overview of the great phenotypic diversity and their function found among crustaceans. The first broad treatment of Crustacea in decades, the book will be invaluable for researchers and students in this and related fields.

Economic Integration and FDI Paul Brenton 1998

Recent evidence suggests that regional economic integration provides an important stimulus not only to trade, but also to FDI. In contrast, the available theory on FDI does not yet provide empirically testable propositions on the effects of concurrent trade and investment liberalisation. Moreover, given the limits of simulation models, which rely heavily upon parameter choice, in assessing the impact of such liberalisation, there is a need for empirical analysis to identify the principal features of FDI. This paper uses a 'gravity model' approach to assess the impact of the deepening integration between the EU and the CEECs on FDI flows in terms of three key issues. First, we provide systematic estimates of the expected long-term level of FDI in the CEECs. Second, we investigate whether FDI in the CEECs, on the one hand, and source country exports and imports, on the other hand, are complements or substitutes. Finally, we enquire whether an increase in the attractiveness of the CEECs to foreign investors has affected the magnitude of FDI going to other European countries.

Consolidated Audit Trail (Us Securities and Exchange Commission Regulation) (Sec) (2018

Edition) - The Law Library 2019-01-18

The Law Library presents the complete text of the Consolidated Audit Trail (US Securities and Exchange Commission Regulation) (SEC) (2018 Edition). Updated as of May 29, 2018 The Securities and Exchange Commission ("Commission") is adopting Rule 613 under the Securities Exchange Act of 1934 ("Exchange Act" or "Act") to require national securities exchanges and national securities associations ("self-regulatory organizations" or "SROs") to submit a national market system ("NMS") plan to create, implement, and maintain a consolidated order tracking system, or consolidated audit trail, with respect to the trading of NMS securities, that would capture customer and order event information for orders in NMS securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution. This ebook contains: - The complete text of the Consolidated Audit Trail (US Securities and Exchange Commission Regulation) (SEC) (2018 Edition) - A dynamic table of content linking to each section - A table of contents in introduction presenting a general overview of the structure

Foreign Direct Investment in Hungary - Mathias Urbaczek 2005-07-24

Seminar paper from the year 2005 in the subject Economics - Foreign Trade Theory, Trade Policy, grade: 2,0, Cracow University of Economics, 49 entries in the bibliography, language: English, abstract: Preface For Hungary and the European Union, the 01. May 2004 is one of the most important dates of the history of Hungary, because they and 9 other countries joined the EU. Finally now the very long time of the separation between Eastern and Western Europe is over. It is now the first time in Europe that all countries of this big continent could live together in peace and can create an economical and political union. For Hungary it was like for the other new members a very long and hard way to transform the economy to the rules of the market economic system, but they have some advantages because they have started the reform process already before the political change. So as a reason now Hungary has received 31 billion euros as foreign direct investment until 2003. This means they have about 3.100 Euro FDI per inhabitant, only the Czech Republic has received more FDI per inhabitant. In the essay the authors want to concentrate to the historical background, the business law, the motivation for invest in Hungary and give some data about the FDI in Hungary.

How to Get Into Oxbridge - Christopher See 2012-05-03

With competition to get into Oxbridge now so fierce, this book goes beyond standard application technique to focus on long-term development of intellectual potential including insight into the power of positive decision-making; how to practise independent and critical thinking skills; and how you can develop extra-curricular knowledge in genuine and impressive ways to stand out from the crowd. The book includes practical and insider knowledge that can't be found elsewhere - like how to strategically choose your college to boost your chances of admission, and how to interpret and respond to interview questions in a way that demonstrates your intellectual curiosity and academic potential. You'll find sample personal statements; examples of interview questions for all subjects; practical advice on fees and funding; and how to manage parents and peers. There is also a chapter dedicated to International Students.

Recent Research on Geomorphology, Sedimentology, Marine Geosciences and Geochemistry - Atilla Çiner 2022-01-12

This edited book is based on the papers accepted for presentation during the 2nd Springer Conference of the Arabian Journal of Geosciences (CAJG-2), Tunisia, in 2019. Major subjects treated in the book include

geomorphology, sedimentology, and geochemistry. The book presents an updated unique view in conjugating field studies and modeling to better quantify the process-product binomial unusual in geosciences. In the geomorphology section, 24 papers deal with topics related to fault slip and incision rates, soil science, landslides and debris flows, coastal processes, and geoarcheology, and geoheritage. Under the sedimentology section, 34 papers including stratigraphy, and environmental, tectonic, and diagenetic processes, together with evolutionary, biostratigraphic, and paleo-environmental significance of paleontology are presented. Additionally, this section also contains papers on marine geosciences, from molecular proxies related to climate to geophysical surveys. Last but not least, the third section on geochemistry is composed of 26 papers that are focused on sedimentary geochemistry and mineralogical characterization, magmatic and metamorphic processes and products, and the origin and exploration of mineral deposits. This book resumes the current situation related to the abovementioned topics mainly in the Mediterranean realm. The volume book is of interest to all researchers, practitioners, and students in the fields of geomorphology, sedimentology, and geochemistry, as well as those engaged in environmental geosciences, soil science, stratigraphy and paleontology, geoarcheology and geoheritage, marine geosciences, petrology, metallogenesis, and mineral deposits.

Hacker Techniques, Tools, and Incident Handling - Philip Oriyano 2018-09-04

Hacker Techniques, Tools, and Incident Handling, Third Edition begins with an examination of the landscape, key terms, and concepts that a security professional needs to know about hackers and computer criminals who break into networks, steal information, and corrupt data. It goes on to review the technical overview of hacking: how attacks target networks and the methodology they follow. The final section studies those methods that are most effective when dealing with hacking attacks, especially in an age of increased reliance on the Web. Written by subject matter experts, with numerous real-world examples, Hacker Techniques, Tools, and Incident Handling, Third Edition provides readers with a clear, comprehensive introduction to the many threats on our Internet environment and security and what can be done to combat them.

Soils and Sediments - Helene Paquet 2012-12-06

Clays and soils are of great importance in various scientific fields, such as agriculture and environmental science, and in mineral deposits. Students and close collaborators of Georges Millot, the eminent French clay sedimentologist, have put together a book with topics ranging from weathering processes and diagenetic evaluation of sediments to sedimentary mineral deposits. The book is of interest to practitioners, advanced students as well as teachers in the above fields.
