Speech problems: articulation and phonological disorders

Articulation and phonology (talk to refer to the voice is used to produce. A child who has an articulation disorder has problems forming speech sounds properly. A child who has a phonological can produce the sounds correctly, but may not be in the right place.

Articulation vs Phonology - Any Speech & Language

A phonological process is often a reflection of the sound systems that also affects intelligibility. Children with phonological problems demonstrate difficulty in acquiring a phonological system, involving organizing the patterns of sounds in the brain and in the output, not necessarily in the motor production of the sounds that articulation errors.
