## One Degree of Change - Larry Jackson 2015-01-23

This book was written for the person who understands that there is so much more for them to accomplish but just can't seem to breakthrough. One of the traps in life is being satisfied with a 211 degree life. This is a very good life and many would characterize it as a successful life. But for the person who should be living at 212 degrees they feel like the oyster with sand in its shell, very agitated. Many times they can't put their finger on what is wrong or what is needed. Even the Christian living a good life before God can feel that something is missing. The thing missing is their purpose. They love the Lord and all that He provides but they realize there is more they should be doing for Him. If you feel like you are not walking in your purpose then this is the book for you! One Degree of Change: How to Succeed Now! will open your heart and mind to just how close you really are to accomplishing what the Lord has designed you for. It will provide much needed answers for your advancement. Because you are only one degree from the success you desire.

## **Santorini Volcano** - Timothy H. Druitt 1999

Santorini has long fascinated geologists, with some important early work on volcanoes being conducted there. Since 1980, research groups at Cambridge University, and later at the University of Bristol and Blaise Pascal University in Clermont-Ferrand, have collected a large amount of data on the stratigraphy, geochemistry, geochronology and petrology of the volcanics. The volcanic field has been remapped at a scale of 1:10,000. A remarkable picture of cyclic volcanic activity and magmatic evolution has emerged

from this work. Much of this work has remained unpublished until now. The Memoir synthesizes all the data from the Cambridge/Bristol/Clermont groups, and integrates published data from other research groups. It provides the latest interpretation of the tectonic and magmatic evolution of Santorini. It is accompanied by the new 1:10,000 full-colour geological map of the island.

**Fundamentals of Aircraft and Airship Design** - Leland Malcolm Nicolai 2010

The aircraft is only a transport mechanism for the payload, and all design decisions must consider payload first. Simply stated, the aircraft is a dust cover. "Fundamentals of Aircraft and Airship Design, Volume 1: Aircraft Design" emphasizes that the science and art of the aircraft design process is a compromise and that there is no right answer; however, there is always a best answer based on existing requirements and available technologies.

**Bobby Fischer's Games of Chess** Bobby Fischer 2008

This is the only book ever written entirely by Bobby Fischer. It is not to be confused with other books with similar names that were written by other authors. Here is the blurb on the original dust jacket, as published in 1959: THERE ARE 34 games in this book. The 13 from the U.S. Championship Tournament of 1957-58 and the prize-winning "Game of the Century" from the Third Rosenwald Trophy Tournament are penetratingly analyzed by Bobby Fischer, whose annotations provide invaluable instructions to the chess player of either average or advanced ability. In addition, this book includes the scores of Bobby Fischer's 20 games from the 1958 Portoroz Interzonal Tournament in which he played against the world's elite in chess, among them Tal, Gligorich, Petrosyan, and Bronstein. The games in this book reveal Bobby Fischer's brilliance in middle and end-game strategy, and also the latest and soundest treatments of popular openings-in particular, the Sicilian and King's Indian defenses. By playing these games over, the reader will become familiar with the patterns of the latest and soundest lines in chess, and will automatically begin to make stronger moves in his own games. At the age of fifteen, Bobby Fischer was the youngest international grandmaster of all time. He lives in Brooklyn, was a junior at Erasmus Hall High School, and looking forward to the 1959 Candidates' Tournament, the winner of which challenges Mikhail Botvinnik for the world championship. **Thinking Security** - Steven M. Bellovin 2015-12-03

If you're a security or network professional, you already know the "do's and don'ts": run AV software and firewalls, lock down your systems, use encryption, watch network traffic, follow best practices, hire expensive consultants . . . but it isn't working. You're at greater risk than ever, and even the world's most security-focused organizations are being victimized by massive attacks. In Thinking Security, author Steven M. Bellovin provides a new way to think about security. As one of the world's most respected security experts, Bellovin helps you gain new clarity about what you're doing and why you're doing it. He helps you understand security as a systems problem, including the role of the all-important human element, and shows you how to match your countermeasures to actual threats. You'll learn how to move beyond last year's checklists at a time when technology is changing so rapidly. You'll also understand how to design security architectures that don't just prevent attacks wherever possible, but also deal with the consequences of failures. And, within the context of your coherent architecture, you'll learn how to decide when to invest in a new security product and when not to. Bellovin, co-author of the best-selling Firewalls and Internet Security, caught his first hackers in 1971. Drawing on his deep experience, he shares

actionable, up-to-date guidance on issues ranging from SSO and federated authentication to BYOD, virtualization, and cloud security. Perfect security is impossible. Nevertheless, it's possible to build and operate security systems far more effectively. Thinking Security will help you do just that.

**Spatial Data Mining** - Deren Li 2016-03-23

This book is an updated version of a well-received book previously published in Chinese by Science Press of China (the first edition in 2006 and the second in 2013). It offers a systematic and practical overview of spatial data mining, which combines computer science and geo-spatial information science, allowing each field to profit from the knowledge and techniques of the other. To address the spatiotemporal specialties of spatial data, the authors introduce the key concepts and algorithms of the data field, cloud model, mining view, and Deren Li methods. The data field method captures the interactions between spatial objects by diffusing the data contribution from a universe of samples to a universe of population, thereby bridging the gap between the data model and the recognition model. The cloud model is a qualitative method that utilizes quantitative numerical characters to bridge the gap between pure data and linguistic concepts. The mining view method discriminates the different requirements by using scale, hierarchy, and granularity in order to uncover the anisotropy of spatial data mining. The Deren Li method performs data preprocessing to prepare it for further knowledge discovery by selecting a weight for iteration in order to clean the observed spatial data as much as possible. In addition to the essential algorithms and techniques, the book provides application examples of spatial data mining in geographic information science and remote sensing. The practical projects include spatiotemporal video data mining for protecting public security, serial image mining on nighttime lights for assessing the severity of the Syrian Crisis, and the applications in the government project 'the Belt and Road Initiatives'.
