Dangerous Harvest - Michael K. Steinberg 2004

(Publisher-supplied data) The global drug trade and its associated violence, corruption, and human suffering create global problems that include political and military conflicts, ethnic minority human rights violations, and stresses on economic development. Drug production and eradication affects the stability of many states, shaping and sometimes distorting their foreign policies. External demand for drugs has transformed many indigenous cultures from using local agricultural activity to being enmeshed in complex global problems. **Dangerous Harvest** presents a global overview of indigenous peoples' relations with drugs. It presents case studies from various cultural landscapes that are involved in drug plant production, trade, and use, and examines historical uses of illicit plant substances. It continues with coverage of eradication efforts, and the environmental impact of drug plant production. In its final chapter, it synthesizes the major points made and forecasts future directions of crop substitution programs, international eradication efforts, and changes in indigenous landscapes. The book helps unveil the farmer, not to glamorize those who grow drug plants but to show the deep historical, cultural, and economic ties between farmer and crop.

The Art of Being Human - Michael Wesch 2018-08-07

Anthropology is the study of all humans in all times in all places. But it is so much more than that. "Anthropology requires strength, valor, and courage," Nancy Scheper-Hughes noted. "Pierre Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

Global Issues in Education - Greg Wiggan 2009-08-16

They synthesize macrosociology with educational research, which provides readers with the background, core knowledge, and global focus that is needed to understand international issues, as well as deal with diversity

in the classroom. **Global Issues in Education** also addresses the need for additional research that makes the connections between the geopolitical economy and education, and it does this with a focus on the link to culture, ethnicity, and education.

A Global History of Indigenous Peoples - K. Coates 2004-10-29

A Global History of Indigenous Peoples examines the history of the indigenous/tribal peoples of the world.

The work spans the period from the pivotal migrations which saw the peopling of the world, examines the processes by which tribal peoples established themselves as separate from surplus-based and more material societies, and considers the impact of the policies of domination and colonization which brought dramatic change to indigenous cultures. The book covers both tribal societies affected by the expansion of European empires and those indigenous cultures influenced by the economic and military expansion of non-European powers. The work concludes with a discussion of contemporary political and legal conflicts between tribal peoples and nation-states and the on-going effort to sustain indigenous cultures in the face of globalization, resource developments and continued threats to tribal lands and societies.

The Power of Scale: A Global History Approach - John Bodley 2015-06-01

Throughout history, the natural human inclination to accumulate social power has led to growth and scale increases that benefit the few at the expense of the many. John Bodley looks at global history through the lens of power and scale theory, and draws on history, economics, anthropology, and sociology to demonstrate how individuals have been the agents of social change, not social classes. Filled with tables and data to support his argument, this book considers how increases in scale necessarily lead to an increasingly small elite gaining disproportionate power, making democratic control more difficult to achieve and maintain.

Disrobing the Aboriginal Industry - Frances Widdowson 2008-10-24

By examining the root causes of aboriginal problems, Frances Widdowson and Albert Howard expose the industry that has grown up around land claim settlements, showing that aboriginal policy development over the past thirty years has been manipulated by non-aboriginal lawyers and consultants. They analyse all the major aboriginal policies, examine issues that have received little critical attention - child care, health care, education, traditional knowledge - and propose the comprehensive government provision of health, education, and housing rather than deficient delivery through Native self-government.

International Handbook of Historical Archaeology - Teresita Majewski 2009-06-07

In studying the past, archaeologists have focused on the material remains of our ancestors. Prehistorians generally have only artifacts to study and rely on the diverse material record for their understanding of past societies and their behavior. Those involved in studying historically documented cultures not only have extensive material remains but also contemporary texts, images, and a range of investigative technologies to enable them to build a broader and more reflexive picture of how past societies, communities, and individuals operated and behaved. Increasingly, historical archaeology refers not to a particular period, place, or a method, but rather an approach that interrogates the tensions between artifacts and texts irrespective of context. In short, historical archaeology provides direct evidence for how humans have shaped the world we live in today. Historical archaeology is a branch of global archaeology that has grown in the last 40 years from its North American base into an increasingly global community of archaeologists each studying their area of the world in a historical context. Where historical archaeology started as part of the study of the post-Columbian societies of the United States and Canada, it has now expanded to interface with the post-medieval archaeologies of Europe and the diverse post-imperial experiences of Africa, Latin America, and Australasia. The 36 essays in the International Handbook of Historical Archaeology have been specially commissioned from the leading researchers in their fields, creating a wide-ranging digest of the increasingly global field of historical archaeology. The volume is divided into two sections, the first reviewing the key themes, issues, and approaches of historical archaeology today, and the second containing a series of case studies charting the development and current state of historical archaeological practice around the world. This key reference work captures the energy and diversity of this global discipline today.

The WEIRDest People in the World - Joseph Henrich 2020-09-08

A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist

Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

Odd Tribes - John Hartigan 2005-10-24

Odd Tribes challenges theories of whiteness and critical race studies by examining the tangles of privilege, debasement, power, and stigma that constitute white identity. Considering the relation of phantasmatic cultural forms such as the racial stereotype “white trash” to the actual social conditions of poor whites, John Hartigan Jr. generates new insights into the ways that race, class, and gender are fundamentally interconnected. By tracing the historical interplay of stereotypes, popular cultural representations, and the social sciences’ objectifications of poverty, Hartigan demonstrates how constructions of whiteness continually depend on the vigilant maintenance of class and gender decorums. *Odd Tribes* engages debates in history, anthropology, sociology, and cultural studies over how race matters. Hartigan tracks the spread of “white trash” from an epithet used only in the South prior to the Civil War to one invoked throughout the country by the early twentieth century. He also recounts how the cultural figure of “white trash” influenced academic and popular writings on the urban poor from the 1880s through the 1990s. Hartigan’s critical reading of the historical uses of degrading images of poor whites to ratify lines of color in this country culminates in an analysis of how contemporary performers such as Eminem and Roseanne Barr challenge stereotypical representations of “white trash” by claiming the identity as their own. *Odd Tribes* presents a compelling vision of what cultural studies can be when diverse research methodologies and conceptual frameworks are brought to bear on pressing social issues.

Isolationist States in an Interdependent World - Helga Turku 2016-05-06

States that withdraw from the international system provide insight into an unexplored area of international relations in terms of rationality, self-interest, power politics, cooperation and alliances. Indeed, isolationism in an interdependent state system goes against the logic of modern society and state systems. Using historical, comparative and inductive analysis, Helga Turku explains why states may choose to isolate themselves both domestically and internationally, using comparative historical analysis to flesh out isolationism as a concept and in practice. The book examines extreme forms of self-imposed domestic and international isolation in an interdependent international system, noting the effects on both the immediate interests of a ruling regime and the long-term national interests of the state and the populace.

Making Global MBAs - Andrew Orta 2019-10-01

A generation of aspiring business managers has been taught to see a world of difference as a world of opportunity. In *Making Global MBAs*, Andrew Orta examines the culture of contemporary business education, and the ways MBA programs participate in the production of global capitalism through the education of the business subjects who will be managing it. Based on extensive field research in several

leading US business schools, this groundbreaking ethnography exposes what the culture of MBA training says about contemporary understandings of capitalism in the context of globalization. Orta details the rituals of MBA life and the ways MBA curricula cultivate both habits of fast-paced technical competence and “softer” qualities and talents thought to be essential to unlocking the value of international cultural difference while managing its risks. Making Global MBAs provides an essential critique of neoliberal thinking for students and professionals in a wide variety of fields.

Victims of Progress - John H. Bodley 2014-08-14

Victims of Progress, now in its sixth edition, offers a compelling account of how technology and development affect indigenous peoples throughout the world. Bodley's expansive look at the struggle between small-scale indigenous societies, and the colonists and corporate developers who have infringed their territories reaches from 1800 into today. He examines major issues of intervention such as social engineering, economic development, self-determination, health and disease, global warming, and ecocide. Small-scale societies, Bodley convincingly demonstrates, have survived by organizing politically to defend their basic human rights. Providing a provocative context in which to think about civilization and its costs—shedding light on how we are all victims of progress—the sixth edition features expanded discussion of “uprising politics,” Tebtebba (a particularly active indigenous organization), and voluntary isolation. A wholly new chapter devotes full coverage to the costs of global warming to indigenous peoples in the Pacific and the Arctic. Finally, new appendixes guide readers to recent protest petitions as well as online resources and videos.

The Anthropology of Obesity in the United States - Anna Bellisari 2016-03-17

This volume examines the biocultural dimensions of obesity from an anthropological perspective in an effort to broaden understanding of a growing public health concern. The United States of America currently has the highest rates of obesity among developed countries, with an alarming rise in prevalence in recent decades which promises to affect the nation for years to come. Bellisari helps students to grasp the complex nature of this obesity epidemic, demonstrating that it is the consequence of many interacting forces which range from individual genetic and physiological predispositions to national policies and American cultural beliefs and practices. As much a social problem as an individual one, the development of obesity is in fact encouraged by the pattern of high consumption and physical inactivity that is promoted by American economic, political, and ideological systems. With a range of up-to-date scientific and medical data, The

Anthropology of Obesity in the United States provides students with a comprehensive picture of obesity, its multiple causes, and the need for society-wide action to address the issue.

Cultural Anthropology - John Bodley 2004-01-01

This text introduces basic concepts of cultural anthropology by comparing cultures of increasing scale and focusing on specific universal issues. The author challenges students to consider the "big" questions about the nature of cultural systems: How do cultures of different scale meet the challenge of maximizing human security in a dynamic, often threatening world? What is it like to be human under different cultural conditions? What human inequalities are natural and which are cultural? What are the human costs of socioeconomic growth? . "Understanding how tribes, states, and global systems work and how they differ might help citizens design a more secure and equitable world," argues Bodley; it is this advocacy position that informs the text..

Extinction Or Survival? K. Adam 2009

How could an urban American Indian tribe, having survived relentless earlier governmental attempts to declare its culture extinct, be once again on the verge of extinction?The Tigua of Ysleta del Sur Pueblo dwell in the outskirts of El Paso, Texas, where the infamous Jack Abramoff was in the news for helping to close their highly successful casino. This casino had created jobs and funded health care for the tribe, and

now the Tigua are once more taking action to preserve their economy, membership, and culture. This highly publicised casino story is set against the remarkably rich history of the Tigua, including earlier attempts by national and state governments to steal the tribe's land and destroy its legal status. Anthropologist S. K. Adam explores how questions of identity can be linked to cultural survival: Had the Tigua somehow survived 300 years of persecution and urban encroachment, or, as alleged by the government, were they really just Mexicanised Indians acting fraudulently? Adam examines how terms such as indigeneity, identity, authenticity, culture change, and perseverance are understood and defined by the US government. He analyses how issues of power, law, discourse, genocide, and self-determination affect the relationship between the United States and its indigenous populations, past and present.

The Mind of the Chimpanzee - Elizabeth V. Lonsdorf 2010-08-15

Understanding the chimpanzee mind is akin to opening a window onto human consciousness. The Mind of the Chimpanzee brings together scores of prominent scientists from around the world to share the most recent research into what goes on inside the mind of our closest living relative.

Intertwining a range of topics—including imitation, tool use, face recognition, culture, cooperation, and reconciliation—with critical commentaries on conservation and welfare, the collection aims to understand how chimpanzees learn, think, and feel, so that researchers can not only gain insight into the origins of human cognition, but also crystallize collective efforts to protect wild chimpanzee populations and ensure appropriate care in captive settings. With a breadth of material on cognition and culture from the lab and the field, The Mind of the Chimpanzee is a first-rate synthesis of contemporary studies of these fascinating mammals that will appeal to all those interested in animal minds and what we can learn from them.

Beyond Multicultural Art Education - Rachel Mason, Doug Boughton 1999

Multiculturalism is a term that has been much used in educational texts in recent years. Its usage is frequently taken for granted in the rhetoric of curriculum literature. However, it has recently become clear that there are significant variations of interpretations of multiculturalism in different world regions. This book takes a new and deeper look at the notion of multiculturalism through the lens of art education. In educational terms art is a unique tool for the investigation of cultural values because it transcends the barrier of language and provides visceral and tacit insights into cultural change. In order to address the educational interpretations and methods of implementing multiculturalism in different regions of the world, this book contains discussion and analysis of perspectives on art education theory and practice from thirteen countries. The authors of each chapter are respected multicultural experts in their geographic locations who are well equipped to provide unique insights into the particular issues of multiculturalism viewed from the perspective of art in educational contexts. The book as a whole provides tools for the conceptual analysis of contemporary notions linked with multiculturalism, such as interculturalism, internationalism and globalisation. It also provides strategies for art teaching in relation to these ideas. While the term 'multicultural education' is problematic, this book presents conceptual frameworks that should assist educators to examine their own teaching on issues of equity and diversity that are central to the multicultural education debate. ©
