Advances in Civil Engineering: Structural Seismic Resistance, Monitoring and Detection - Mohd Johari Mohd Yusof 2022-10-21
Advances in Civil Engineering: Structural Seismic Resistance, Monitoring and Detection is a collection of papers resulting from the conference on Structural Seismic Resistance, Monitoring and Detection (SSRMD 2022), Harbin, China, 21-23 January, 2022. According to the development of many new seismic theories, technologies and products, the primary goal of this conference is to promote research and developmental activities in structural seismic resistance, monitoring and detection. Moreover, another goal is to promote scientific information interchange between scholars from the top universities, business associations, research centers and high-tech enterprises working all around the world. The conference conducted in-depth exchanges and discussions on relevant topics such as structural seismic resistance, monitoring and detection, aiming to provide an academic and technical communication platform for scholars and engineers engaged in scientific research and engineering practice in the field of civil engineering, seismic resistance and engineering entity structure testing. By sharing the research status of scientific research achievements and cutting-edge technologies, it helps scholars and engineers all over the world to comprehend the academic development trend and broaden research ideas. So as to strengthen international academic research, academic topics exchange and discussion, and promoting the industrialization cooperation of academic achievements.

Bridge Scour and Stream Instability Countermeasures: Experience, Selection, and Design Guidance Third Edition - U. S. Department of Transportation 2015-10-27

The purpose of this document is to identify and provide design guidelines for bridge scour and stream instability countermeasures that have been implemented by various State departments of transportation (DOTs) in the United States. Countermeasure experience, selection, and design guidance are consolidated from other FHWA publications in this document to support a comprehensive analysis of scour and stream instability problems and provide a range of solutions to those problems. The results of recently completed National Cooperative Highway Research Program (NCHRP) projects are incorporated in the design guidance, including: countermeasures to protect bridge piers and abutments from scour; riprap design criteria, specifications, and quality control, and environmentally sensitive channel and bank protection measures. Selected innovative countermeasure concepts and guidance derived from practice outside the United States are introduced. In

Bridge Falsework, Concrete Formwork, and Practical Earth Shoring
William E. Hubbard 2021-08-13

Bridge Falsework, Concrete Formwork, and Practical Earth Shoring By:
William E. Hubbard Bridge Falsework, Concrete Formwork, and
Practical Earth Shoring describes how to build bridges. The book is
interesting to engineers trying to learn how to build bridges, and the
relevant message is that the information within will present economical
methods of performing the work necessary to build a bridge. The author
does not believe there is another text that covers this topic, and it
answers the questions that arise when designing bridge falsework and
associated work. The author hopes the reader will be able to design
economical falsework and earth shoring after reading this book.
