**The Clinical Utility of Compounded Bioidentical Hormone Therapy** - National Academies of Sciences, Engineering, and Medicine  
2020-09-22

The U.S. Food and Drug Administration (FDA) has approved dozens of hormone

therapy products for men and women, including estrogen, progesterone, testosterone, and related compounds. These products have been reviewed for safety and efficacy and are indicated for treatment of symptoms resulting from hormonal changes associated with menopause or other endocrine-based disorders. In recent decades, an increasing number of health care providers and patients have turned to custom-formulated, or compounded, drug preparations as an alternative to FDA-approved drug products for hormone-related health concerns. These compounded hormone preparations are often marketed as "bioidentical" or "natural" and are commonly referred to as compounded bioidentical hormone therapy (cBHT). In light of the fast-growing popularity of cBHT preparations, the clinical utility of these compounded preparations is a substantial public health concern for various stakeholders, including medical practitioners, patients,

at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine distills all her findings and the latest information from the scientific community in a

highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

**Manboob Nation** - Nathan Goodyear 2014-02-27

Testosterone provides the hormonal foundation for masculinity, determining what it means to be male. So what does a global decline in testosterone levels say about the current generation of men? Why is the greatest testosterone decline seen in American men under the age of thirty? A broken, reactive medical system isn't concerning itself with answering these questions. The medical profession classifies testosterone loss as "testicular dysgenesis syndrome." Calling a condition a syndrome, however, is just a fancy medical term for "we don't know why this is happening." When a condition is classified as a syndrome, the symptoms receive treatment, not the cause. Nathan Goodyear, MD rejects reactive approaches to testosterone loss, as well as the
