Achieving Sustainable E-Government in Pacific Island States - Rowena Cullen
2017-02-17

This book analyzes the common set of obstacles to the development and integration of government Information and Communication Technology (ICT) projects and effective e-government initiatives in developing countries. Australia and New Zealand, both highly rated in global rankings for e-government and active in a variety of e-government development projects across the region. There has been a general failure to identify priorities and align projects with local needs in ICT/e-government projects. Small Island Developing States (or SIDS) present a unique problem in terms of e-government. Not only do they suffer from a common set of barriers to ICT development such as their remoteness, geographical dispersion, moist tropical climates, largely rural populations, and lack of ICT capacity and infrastructure, but are also dependent on external agencies for investment, and must negotiate with powerful donors who have conflicting agendas. E-government is widely regarded as 'transformational', increasing efficiency, productivity, accountability, economic growth, and citizen involvement. But while the governments of SIDS are committed to harnessing ICTs

for effective government and economic development, they face major challenges in establishing successful e-government initiatives, due to the problems outlined above, coupled with a lack of HR capacities and appropriate strategies and policies. Drawing on the experience of the states mentioned above, as well as regional quasi-governmental bodies, nongovernmental organizations (NGOs), aid agencies, and the private sector, the book will be of interest to researchers and students in the fields of e-government, public administration, political science, communication, information science, and social media.

Quality Chess Puzzle Book

John Shaw 2009-11-15

When I decided to make a chess puzzle book I had many ideas in mind: The puzzles should be challenging but not so difficult that a chessboard is needed they can be solved on the train, plane or wherever you happen to be when you have a few minutes to spare.

The positions should be educational with some instructive point to the solution. I have generally stuck to that, but I also selected many puzzles just because they were fun. The positions are all from fairly recent games, so that the reader will not have seen them before in older puzzle books. John Shaw is a chess grandmaster who has been Scottish Chess Champion three times.

Mozart's greatest works were written in Vienna in the decade before his death (1781-1791). It traces consistencies and changes in Mozart's professional persona and his *modus operandi* and sheds light on other prominent musicians, audience expectations, publishing, and concert and dramatic practices and traditions. Giving particular prominence to primary sources, Simon P. Keefe offers new biographical

The discussion moves between two forms of text: social theory and cinematic representations of contemporary life. Denzin analyzes the ideas of society

Accelerating MATLAB with GPU Computing - Jung W. Suh
2013-11-18

Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. Accelerating MATLAB with GPUs offers a primer on

bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers' projects. Download example codes from the publisher's website: <http://booksite.elsevier.com/9780124080805/> Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as

Successful hedge fund investing begins with well-informed strategy. *A Guide to Starting Your Hedge Fund* is a practical, definitive "how-to" guide, designed to help managers design and launch their own funds, and to help investors select and diligence new funds. The first book to examine the practical aspects of setting up and operating funds with a focus on energy commodity markets, this book scrutinises the due diligence process and comprehensively reviews the opportunities and risks of all energy commodity markets as hedge fund investments. Extensive planning and strategy advice prove invaluable to prospective fund managers and investors alike, and detailed discussion of the markets' constraints help inform procedural decisions. Readers gain insight into practical matters including legal and commercial
