Helping Grieving People - When Tears Are Not Enough

- J. Shep Jeffreys 2011-05-09
Helping Grieving People - When Tears Are Not Enough is a handbook for care providers who provide service, support and counseling to those grieving death, illness, and other losses. This book is also an excellent text for academic courses as well as for staff development training. The author addresses grief as it affects a variety of relationships and discusses different intervention and support strategies, always

cognizant of individual and cultural differences in the expression and treatment of grief. Jeffreys has established a practical approach to preparing grief care providers through three basic tracks. The first track: Heart - calls for self-discovery, freeing oneself of accumulated loss in order to focus all attention on the griever. Second track: Head - emphasizes understanding the complex and dynamic phenomena of human grief. Third track: Hands - stresses the caregiver's actual intervention, and speaks to lay and professional levels of skill, as well as the various approaches for healing available. Accompanying these three motifs, the Handbook discusses the social and cultural contexts of grief as applied to various populations of grievers as well as the underlying psychological basis of human grief. Throughout the book, Jeffreys presents the role of the caregiver as an Exquisite Witness to the journey of grief and pain of bereaved family and friends, and also to the

path taken by dying persons and their families. The second edition of *Helping Grieving People* remains true to the approach that has been so well received in the original volume. It includes updated research findings and addresses new information and developments in the field of loss, grief and bereavement.

Before Modern Humans

Grant S. McCall 2020-09-11
This fascinating volume, assessing Lower and Middle Pleistocene African prehistory, argues that the onset of the Middle Stone Age marks the origins of landscape use patterns resembling those of

modern human foragers. Inaugurating a paradigm shift in our understanding of modern human behavior, Grant McCall argues that this transition—related to the origins of "home base" residential site use—occurred in mosaic fashion over the course of hundreds of thousands of years. He concludes by proposing a model of brain evolution driven by increasing subsistence diversity and intensity against the backdrop of larger populations and Pleistocene environmental unpredictability. McCall argues that human brain size did not arise to support the complex patterns of social behavior that pervade our lives today, but instead large human brains were co-opted for these purposes relatively late in prehistory, accounting for the striking archaeological record of the Upper Pleistocene.

Practice - Robert F. Rivas
1996

This new book is a compilation of actual cases submitted by social workers and faculty teaching social work courses. The authors, Robert Rivas and Grafton Hull, selected cases that would best help students acquire the range of skills theyll need to become effective helpers, such as how to apply what they learn and how to determine what to do to offer the client maximum help...This case study approach enables students to participate in learning experiences prior to field instruction courses, and it also provides opportunities to discuss common experiences. Published in workbook form, each case includes helpful guidelines in the form of questions that can be used to help students in their analyses and learning.

Case Studies in Rehabilitation - Patricia A. Ghikas 2001

Case Studies in Rehabilitation is a series of case studies compiled into one reference text for the student. This

necessary textbook will allow the reader to analyze "real-life" examples of individuals with a variety of diagnoses and to develop clinical reasoning skills. A variety of cases are presented in Case Studies in Rehabilitation covering myriad topics such as orthopedics, neurology, rheumatology, and oncology. These case studies represent the primary adult pathologies, impairments, and functional limitations seen by clinicians. The case studies will also allow the reader to focus on the concept of disability for an individual when developing a comprehensive plan of care. The user-friendly format allows the user to choose from one of the many topics for practice in developing treatment plans, case analysis or to focus on one area of practice. An important function of this book is that it allows for the integration of didactic learning and hands-on practice when patients are not readily available. All case studies are presented in a narrative format with accompanying forms that are frequently encountered in

clinical practice. Case Studies in Rehabilitation will also help students as they learn to interact with the patients they will be treating in their future careers. This text will allow them to fine-tune their skills in dealing with a variety of different patients and cases and indicate how to handle each individual case in the best possible matter.

Multiple Sclerosis Rehabilitation Marcia Finlayson 2012-08-01

"MS is always in the back of your mind. If there is something you want to do, you always wonder if the MS will allow you do to it." —Darlene, living with MS for 22 years
Living with multiple sclerosis (MS) is challenging and multidimensional. MS pervades all aspects of life: one's body becomes unpredictable and unreliable, one's identity and sense of self are tested, and relationships with others often change. MS symptoms emerge and remit; limitations evolve and progress. MS rehabilitation is an active, person-centered, and goal-oriented process embedded within a respectful and collaborative partnership between the person with MS and the members of his or her rehabilitation treatment team. Using the International Classification of Functioning,

Disability and Health (ICF) as a guiding framework, Multiple Sclerosis Rehabilitation: From Impairment to Participation provides a comprehensive and evidence-based resource to inform and guide clinical reasoning and decision making during each phase of the MS rehabilitation process, from initial referral to post-discharge follow-up. With an emphasis on the application of evidence throughout the entire MS rehabilitation process, the specific objectives of the book are to increase the understanding of: The nature and impact of specific impairments, activity limitations, and participation restrictions experienced by people with MS How to select and use valid, reliable, and relevant assessment tools to inform the development of rehabilitation goals and intervention plans, and to evaluate outcomes This book provides information about the nature and impact of MS on the daily lives of people living with the disease, describes evidence-based assessment

processes and instruments, and summarizes current knowledge that can inform goal setting and intervention planning. Thoughtful application of the knowledge contained in this book will inform and guide rehabilitation providers to work collaboratively with people with MS and enable them to achieve their goals for participation in everyday life.

Cities and Gender - Helen Jarvis 2009-06-02

Men and women experience

the city differently in a myriad of ways. An analysis of urban and gender studies, as co-constitutive subjects, is long overdue. Urban Regeneration & Sustainability - C.A. Brebbia 2016-12-28

Including papers presented at the 11th International Conference on Urban Regeneration and Sustainability held in Alicante, Spain, this book addresses the multidisciplinary aspects of urban planning; a result of the increasing size of cities, the

amount of resources and services required and the complexity of modern society. Most of the earth's population live in cities and the process of urbanisation continues generating problems originating from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the standard of living. The process faces a number of challenges related to reducing pollution, improving main transportation and infrastructure systems and these challenges can contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex mechanisms to manage, nevertheless they represent a productive ground for architects, engineers, city planners, social and political scientists able to conceive new ideas and time them according to technological advances and human requirements. The

papers in this book cover such topics as: Appropriate technologies for smart cities; Architectural issues; Case studies - sustainable practices; Cultural quarters and interventions; Disaster and emergency response; Eco-town planning; Environmental management; Landscape planning and design; Planning for resilience; Quality of life; Socio-economic and political considerations; Pedestrians behaviour in different situation of traffic, modelling and safety; Sustainable urban regeneration and public space; City and beach; Sustainability and the built environment; Sustainable energy and the city; The community and the city; Transportation; Urban conservation and regeneration; Urban development and management; Urban infrastructure; Urban metabolism; Urban planning and design; Urban safety and security; Urban strategies; Waterfront development.
